NERC/FERC Compliance Services

The Energy Policy Act of 2005 mandates reliability standards compliance and enforcement for the Electric Utility Industry. CE Power has resources on staff to answer the growing concern regarding the stability and security of the electric power grid. The engineering experts of CE Power can assist Utility clients with meeting the FERC and NERC reliability standards by providing relay testing and system verification.

Qualified and Experienced Technicians and Engineers

- Average of 20 years experience in the field
- Licensed, Professional Engineers
- Experienced Relay Technicians and Field Engineers
- Intricate Working Knowledge of Utility Systems
- Former Utility personnel on staff
- GAP Program providing apprentice engineers at no cost to clients

Project Organization and Execution

Scope Review and Organization

- Equipment and Component Count
- Test Plan & Reports Format Verification and Compliance
- Personnel Assignments and Responsibilities
- Dispensation and Project Management

Skill Sets

Systems Testing

- End-to-End Differential Relay
- Line Protection Relay
- Components and All Manufacturers
- GE/Multilin, Schweitzer, Basler, Areva, Siemens, ABB
- Upload and Configure Settings
- All Functional Testing

Engineering Services

- Drawing Review
- Design Review
- Reports Format

Relay Upgrade

- Electromechanical to Solid State
- Custom Automatic Throwover Scheme
- Generator Protection/Excitation Upgrades
- Custom Relay Panels

CE Power has and is currently assisting clients with meeting their NERC/FERC reliability requirements in an effort to eliminate costly ramifications of non-compliance. We currently have embedded crews within several large Utility clients, providing high voltage protection and control services.

Contact a local representative to find out how CE Power is continuing the meet the needs of the ever changing landscape of the Power Delivery Marketplace.

Always Safe. Always Honest.
